

Deltecs Infotech Pvt. Ltd.

Drona Mobile is the flagship product of Deltecs InfoTech Pvt. Ltd., a product aimed at corporates for their training, communication and engagement needs. It allows a company's executives and sales force to access learning content on an anytime-anywhere basis.

With Drona Mobile, users can push out videos, quizzes, PPTs, and other learning snippets straight on to the mobile phones of employees, even in offline mode.

The product works on Deltecs' proprietary innovation called 'Push-Learn', which enables the organisation to push videos (like an SMS), to the mobile devices of users and notify them on their arrival.

Drona Mobile is an apt tool for time-pressed high/mid profile corporate executives, a tool that allows them to complete their training on time. Most of the senior management employees struggle to find time for desktop based or classroom training as they are committed to their busy schedules. Moreover, with an acute shortage of trained individuals, growing training needs, and strict timelines, Drona Mobile is well suited to be part of a blended learning model. With Drona Mobile, executives can access the learning/training content through their mobile devices, enjoying the flexibility of time as also cost.

It has been noticed that executives usually access Drona Mobile after office hours, increasing their productivity in the workplace and spurring the efficiency of the organisation. Companies have been able to drastically reduce their training and communication costs by using Drona Mobile. This has helped CIOs effectively manage their budgets.
