

Implementation and Support of SAP B1 Solution

Business Context

- The production unit, branches, HO has been functioning as standalones with no integrated, unified system for data creation, analysis and presentation. This disintegration created lot of data inconsistency
- Data transfer and calculations were mostly manual with very little or no automation
- Difficulty in monitoring the inventories lying in different branches, factory and stores
- Material requirement planning was configured for procurement
- Customised reports have been created for an effective decision making and presentation
- Production flow was automated

Solution

PreludeSys customised the SAP B1 solution to address the issues and focused on developing a robust system to run the business efficiently.

- A complete and unified integration between all the departments, branches, factory has led to the reduction of time required for data transfer
- Modules were customised and configured for an effective inventory tracking, production manufacturing, cost allocations

PreludeSys proved to be an excellent choice of a business partner; we have had a smooth implementation, with a 98 per cent success rate in usage.

GM (Business Development)
Gokaldas Intimatewear Pvt. Ltd.

Benefits

- Significant reduction in time required to process the information based on data transfers between the branches, factory and head office
- Raw material inventory cost reduced effectively. The inventory holding cost has been reduced by 30 per cent with reports to track excess raw materials lying on the floor
- Efficient functioning of the business with instant reporting

About PreludeSys

PreludeSys is a leading technology services provider delivering IT and IT-enabled business solutions to organisations large and small. We help organisations achieve their business goals by bridging the gap between a business vision and real-world technology implementation. Our expertise is in the fields of mobile, cloud and intelligence.
